

Company profile

Eureka is a Dutch engineering and assembly company that is specialized in custom made products for our existing and future customers. You can find our innovative projects in various branches spread out all over the world.

Our ambition is to find perfect solutions for all your technical problems. Our projects are very diverse and therefore a challenge for our team of engineers.

Starting with a brainstorm session, we will come to a suitable solution. After this pre-engineering we can organize the project from engineering, production and assembling up till training and maintenance.

New ideas and existing know-how will be combined. With the available tools, such as 3D modelling and calculation programs, we have the possibility to make an appropriate solution for our client. This way of working is transparent and pleasant for our customer. The customer is always informed of the progress and results of the project.

We have found the following products designed and manufactured:

- Customized products (vacuum cleaner for cavity wall insulation, loading and unloading systems, recycling).
- Off-road transportation vehicles.
- Amphibian tracked vehicles.
- Work platforms and pontoons.
- Diesel and electric-powered pump installations.
- Drill rigs up to 500 m depth (for soil research & water sources)
- Dredging equipment for land and water.
- Sorting machines for solid and liquid materials.

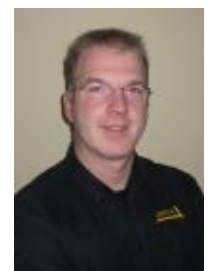

For a complete product- and services list, you can visit our website under www.eureka-bv.com. If you have a problem, feel free to call us for a quote.

With best regards,
EUREKA
